Miles Dai

500 Memorial Drive, Cambridge, MA 02139
(317) 480-9553 • milesdai@mit.edu •milesdai.github.io

Education

Massachusetts Institute of Technology **Cambridge, MA**
Candidate for Bachelor of Science in Electrical Engineering and Computer Science *June, 2020*
Candidate for Masters of Engineering in Electrical Engineering and Computer Science *June, 2021*

- GPA: 4.8/5.0
- Coursework: Operating Systems, Computer Systems Security, Software Construction, Design and Analysis of Algorithms, Web Programming Competition, Computation Structures, Digital Systems Lab

Professional Experience

Amazon Web Services **East Palo Alto, CA**
Software Engineering Intern *June 2019 - August 2019*

- Created software for optimizing deep learning models for various hardware architectures (e.g. Intel, ARM, Nvidia, Mali)
- Added Keras support to the core AWS SageMaker Neo service, providing the ability for customers to achieve over 2x increases in inference speed on ARM and Intel processors.

Dimensional Insight **Cambridge, MA**
Software Engineering Intern *June 2018 - August 2018*

- Created JavaScript business intelligence data visualizations with D3.js for use in a dashboard web interface
- Worked closely with project lead to define parameters and specifications for projects from customer requests

Affective Computing Group, MIT Media Lab **Cambridge, MA**
Undergraduate Researcher *May 2017 - May 2018*

- Applied computer vision techniques and deep neural networks for predicting the engagement levels of autism-spectrum patients on a per-patient basis to improve the effectiveness of autism therapy
- Publication: O. Rudovic, J. Lee, **M. Dai**, B. Schuller, R. W. Picard, "Personalized machine learning for robot perception of affect and engagement in autism therapy", *Science Robotics*, 27 Jun 2018: Vol. 3, Issue 19, eaao6760

Distributed Robotics Lab, MIT Computer Science and Artificial Intelligence Laboratory **Cambridge, MA**
Undergraduate Researcher *January 2017 - May 2017*

- Prototyped a spherical, auxetic, volumetrically-expanding robot module to help streamline the robot design and fabrication process through the use of modular components and a network of Texas Instruments MSP430 microcontrollers

Personal Projects

Automated Jigsaw Puzzle Solver **September 2017**
HackMIT - Hackathon Project

- Created a program in under 24 hours to solve jigsaw puzzles given only images of the pieces
- Designed and implemented heuristics such as edge convexity and color-matching of puzzle pieces using Python and OpenCV to search for the most probable fit

Compact, Low-Cost Colorimeter **May 2016**

- Designed and built a colorimeter (device to measure light absorbance of solutions) for under $60 with off-the-shelf parts
- Measured absorbance at 720, 512, and 465 nm with high precision and low cost

Leadership and Volunteering

Next House Makerspace Chair **2018-present**

- Supervised the planning, construction, and operation of a makerspace within a student dorm.

Next Make, President **2016-present**

- Programmed games in C for an ATtiny microcontroller as part of a circuit board soldering activity for 50 MIT freshmen

MIT Science Olympiad, Planning Committee **2016-present**

- Organize an annual Science Olympiad tournament at MIT for over 1,000 high school students

Skills

Programming Languages: Python, C, Java, MATLAB, HTML, CSS, JavaScript with D3.js, SystemVerilog
Machine Learning Frameworks and Tools: Tensorflow, Keras, OpenCV-Python
CAD/Digital Fabrication: Solidworks, Autodesk Inventor, EAGLE, Laser cutting, 3D printing, waterjet, mill
